

Business Profile

June Bertucci and Small Office Computer Support of Cape Cod

Small Office Computer Support of Cape Cod (S.O.C.S. for short) was founded in 2004 by June Bertucci of W. Hyannisport.

June had been successfully working as an I.T. professional in the banking, legal and recruitment industries for over 20 years and wanted to use that experience locally. She particularly wanted to help self-employed, small businesses and non-profit organizations make the most of their computer hardware and software. June offers the gamut of I.T. ser-

vices such as computer repair and troubleshooting, virus removal, networking (routers & modems) and servers, but more importantly she uses her background and skills to help others work faster and easier on their computers. This lead to her slogan "Save Clicks! Save Time! Save Money!"

Now in her 3rd year of business, June and S.O.C.S. has seen a tremendous growth in the number of small business clients that use them as their I.T. Department. She said "It's been exciting to experience the success from doing the basics, like showing up on time, being professional and beyond all else making sure we solve the problem and get the

client functional again. It has created a lot of client satisfaction."

That client satisfaction has resulted in having primarily referal business to S.O.C.S. to account for its growth. As June has been known to say at networking events "If your computer fights you, call me, because I always win!" It's not just a great catch phrase, she means it. There is a list of satisfied clients and testimonials on www.SOCSoftC.com that speak to this.

S.O.C.S. will be expanding in 2008 by providing training seminars called "The Right Click" designed to help computer users increase their proficiency after just a few hours of instructions.

It covers everything from click by click instruction to the concepts that will help users work better and faster on their computer.

S.O.C.S. recently had a client that utilized this material during one-on-one training sessions and describes his computer skills as going from elementary school to the university, June describes this as exciting because it gets back to the original idea behind S.O.C.S. and their slogan "Save Clicks! Save Time! Save Money!"
